# MONTHLY MARKET UPDATE

## Equity Market

### Indian Equity Markets: March 2025

Indian equity markets recovered in March 2025 as foreign portfolio investors' (FPIs) selling pressure eased. However, uncertainty surrounding the US government's tariff policies continued to impinge on the domestic markets.

The Nifty 50 and BSE Sensex indices posted monthly gains of 6.3% and 5.8%, respectively, in March 2025. However, despite the recovery, the benchmark indices are down ~10% from their peak at the end of March 2025. FPIs sold US\$0.4 bn in March 2025, significantly lower than the US\$4.0 bn outflow witnessed in the previous month. Meanwhile, Domestic Institutional Investors (DIIs) bought US\$1.0 bn during the month.

The broader market indices performed comparatively better, with BSE MidCap and BSE SmallCap reporting monthly gains of 7.6% and 8.3%, respectively. Among the sector indices, Defence, Power, and PSU outperformed with monthly gains of 24.6%, 14.3%, and 14.1%, respectively. However, the IT sector underperformed with a monthly loss of 1.5%.

India's Consumer Price Index (CPI) inflation eased to 3.61% YoY in February 2025 from 4.26% in the previous month. The decline in headline inflation was largely driven by a fall in food inflation to 3.8% YoY in February 2025 from 5.7% YoY in January 2025. Core inflation (which excludes food and fuel) picked up to 4.05% YoY from 3.76% in the previous month, on account of higher gold and silver prices.

India's current account recorded a deficit of 1.1% of GDP in Q3FY25, compared to 1.8% in the previous quarter and 1.1% in Q3FY24. The merchandise trade deficit declined in Q3FY25, as a lower core deficit and a reduced valuables deficit more than offset the higher petroleum deficit. Meanwhile, the services surplus witnessed a broad-based improvement.

The capital account recorded a deficit of US\$26.8 bn in Q3FY25, shifting from a surplus of US\$36.1 bn in the previous quarter. The deficit was driven by substantial Foreign Portfolio Investment (FPI) equity outflows during the December quarter, along with banking capital outflows. Net Foreign Direct Investment (FDI) also remained in deficit. Overall, the Balance of Payments (BoP) recorded a deficit of US\$37.7 bn from a surplus of US\$18.6 bn in the previous quarter.

The economic activity indicators continue to remain mixed. Credit growth remains subdued at ~11% YoY in March 2025, down from the peak of ~16.5% YoY in March 2024. Vehicle registration declined by 1% YoY for March 2025. Residential property sales in India's top 7 cities fell by 28% YoY. However, PMI manufacturing posted a healthy reading of 58.1 for March 2025. GST collections also recorded a decent growth of 9.9% for March 2025.

### Outlook

The reciprocal tariffs announced on 2nd April pose a significant threat to both global and domestic growth. These measures are likely to drive inflation in the United States and disrupt global trade flows. While India is relatively better positioned than many other countries, which may face steeper tariffs, its exports to the US are still expected to decline due to a slowdown in the US economy. Furthermore, supply chains will take time to adjust amid continued economic uncertainty. With significant uncertainty surrounding the implementation of tariffs and their potential impact on global trade, the equity risk premium is likely to rise across markets. Hence, investors should prepare for further volatility.

The domestic macro environment is turning conducive to an economic recovery. First, income tax reductions will increase consumers' disposable income, benefiting consumption-driven sectors, particularly discretionary consumption. Second, food inflation is expected to ease significantly due to robust Kharif production and favourable prospects for the Rabi crop, which will further support consumption. Third, more interest rate cuts are expected in 2025 to stimulate the economy. Fourth, regulatory easing is also underway, with the RBI reversing the November 2023 hike in risk weights for bank loans to NBFCs and microfinance consumer credit loans.

We believe that Price-to-Book is the most reliable valuation parameter. If we examine the broader market, the Sensex's P/B ratio has corrected from 4.30x in September to 3.98x currently, compared to its historic mean of 3.2x. However, several high-quality small and mid-cap companies are approaching reasonable valuations.

Looking ahead, we expect key shifts in market trends:

- Growth leadership is shifting from government capital expenditures to consumer discretionary spending.
- After an outperformance of around three years, Value may take a back seat, and Quality and growth factors may regain favor. Looking ahead, discretionary consumption is expected to rise, driven by budget stimulus for the urban middle class, followed by a pay commission-related boost next year. Additionally, liquidity easing, accompanied by rate cuts, would create a favorable premise for growth and quality to come back.
- In our portfolios, we have been shifting some weight from Value to quality and growth over the last six months.

Several high-growth areas have strong value-creation potential. Key segments include auto EV plays, manufacturing, and pharma CDMO. The power transmission, distribution, and renewable energy sectors also present significant opportunities. Quick commerce is an emerging sector expected to experience exponential growth over the next five years. Additionally, telecom and high-quality private banks remain attractive value segments.

We have consistently maintained a more favourable stance towards inward-looking sectors driven by domestic fundamentals, rather than those reliant on external or global factors. Our outlook continues to reflect this preference, as we believe domestic-oriented sectors offer greater resilience and stability amid global uncertainties.

	10 Yr	62	141	300
28-Feb-25	1 Yr	66	127	262
	3 Yr	91	159	305
	5 Yr	79	153	293
	10 Yr	58	129	296

## March 2025: Assessment and Outlook

### Macros:

India's Consumer Price Index (CPI) inflation eased to 3.61% YoY in February 2025 from 4.26% in the previous month. The decline in headline inflation was primarily driven by a decrease in food inflation to 3.8% YoY in February 2025, from 5.7% YoY in January 2025. Within food, a lower contribution from vegetables drove the decline in headline inflation. Vegetable inflation eased to -1.1% YoY in February 2025 from 11.3% YoY in January, on account of a sharp 11.2% MoM price correction. Core inflation (which excludes food and fuel) increased to 4.05% YoY from 3.76% in the previous month, driven by higher gold and silver prices.

The central government has pegged gross borrowing in H1FY26 at Rs. 8 tn (54% of the total in FY26). The share of 10-year issuance increased to 27% in H1FY26 from 20.5% in H1FY24 and 25.6% in H1FY25. Overall issuances at 10 years and above at 74.9% in H1FY26, are marginally lower than the 76.8% in H1FY25. T-bill issuances in Q1FY26 are pegged at Rs. 2,470 bn vs. Rs. 3,210 bn in Q1FY25. The calendar issued by RBI for H1FY2025-26 borrowings is exactly in line with market expectations. There is an expectation of steepening in the markets owing to RBI actions of OMO purchases and expectations of interest rate cuts in the coming financial year.

The central government's income tax collections recorded robust growth of 22.0% YoY till Feb'25, while corporate tax collections growth remained subdued at 1.9% YoY. Indirect tax collections grew by 7.9% YoY, with central GST collections at 11.1% YoY, customs at 4.2% YoY, and excise duties at -1.4% YoY. Non-tax revenue recorded strong growth of 36.9% YoY, driven by a significant Rs 2.1 trillion dividend transfer by the RBI this fiscal year. Overall, the total receipts of the central government grew by 13.4% YoY. However, the pace of expenditure remained muted at 3.9% YoY, largely due to weak 0.8% YoY growth in capital expenditure. The fiscal deficit for the financial year to date (FYTD) is tracking at 85.8% of the FY25 revised target, which is lower than the 86.5% achieved last year.

Credit growth remained flat at 11% YoY as of 7th March 2025. Deposit growth also remained flat at 10.2% YoY. The credit-to-deposit ratio remained elevated at 80.5%.

### Global:

The US Federal Open Market Committee (FOMC) held the Federal Funds Rate steady at 4.25-4.50% at its March 2025 meeting. The FOMC revised its growth projections downwards as economic activity slowed. The median projection for Q4 2025 was lowered to 1.7% in the March 2025 projections from 2.1% in the December 2024 projections. The FOMC revised its inflation projections upwards. Core PCE inflation was projected to be 2.8% in Q4 2025, up from 2.5% in the December policy. The FOMC raised its unemployment rate projections for 2025 to 4.4%, up from 4.3% earlier, while projections for 2026 and 2027 remained unchanged.

The Fed announced it was slowing the pace of its balance sheet reduction/quantitative tightening (QT). The monthly cap on Treasury security redemptions was reduced from US\$25bn to US\$5bn, while the US\$35bn cap on agency debt and mortgage-backed securities remained unchanged. The dot plot projected 50 bps of rate cuts each for 2025 and 2026. The US 10Y yield has fallen by around 30bps in the past month as trade policy uncertainty has raised growth concerns. Separately, the ECB delivered a hawkish 25 bps policy rate cut, bringing the main refinancing rate and deposit rate down to 2.65% and 2.5% respectively. The Bank of England and Bank of Japan kept their policy rates unchanged in March 2025.

# MONTHLY MARKET UPDATE

## Debt Market

US nonfarm payroll additions for February came in softer than expectations of 170K at 151K. The unemployment rate also edged higher to 4.1% with a 0.3% MoM increase in average hourly earnings. Meanwhile, China's consumer prices dropped by 0.7% YoY. This was the first consumer deflation since January 2024. Globally, commodity prices have begun to rise, driven by a notable increase in industrial metal prices. In Q4 FY25, average Bloomberg's commodity price index recorded a growth of ~ 6.5%, reversing the 3.3% decline observed in the previous quarter due to fear of supply disruptions in midst of escalated geo-political conflicts.

### Local Markets:

Month of March saw volatility in the movement of Indian rupee and the Federal Open Market Committee (FOMC) deliberating on reduction in interest rate. The RBI also made efforts to infuse liquidity through measures like Open Market Operations (OMO) and currency swaps.

India 10Y G-sec yield eased 13bps over the past month ending at 6.60 for the ten-year benchmark paper. Government bonds outperformed corporate bonds due to RBI OMO purchases, limited supply in primary markets along with positive FPI flows. Yield curve saw more steepening during end of the month as sooner rate cut expectations fuelled rally in short end of the yield curve. Sentiments remained bullish due bond supportive macros and risk-off strategy due to high level uncertainty in geo-politics. FPI flows remained positive for the month amounting to ~37 thousand crores.

So far this quarter, the RBI has injected around Rs 6.9 lakh crore of durable liquidity into the banking system through OMO purchases, longer-term VRR auctions and forex swaps. During the month Weighted average call rate has decreased and moved closer to the repo rate, supported by RBI's liquidity measures. Money market yields eased by ~17-25bps across the curve helped by RBI liquidity measures. Core liquidity has shifted to surplus and is expected to remain in surplus in the near term as the uptick in government expenditure and RBI's dividend payout in Q1 FY26 should also support money market conditions hence favouring the short-end yield curve.

### Outlook:

Indian growth momentum rebounded in Q3 FY25, with a 6.2% growth rate, up from 5.6% in Q2 FY25, it remains below potential. Moreover, external factors such as global policy uncertainty, risks from reciprocal tariffs, slower global growth, and geopolitical tensions will continue to pose challenges to domestic growth momentum. The next few months are likely could be volatile, but we anticipate a downward shift in the yield curve (a bit more steepening as liquidity improves), driven by expectations of rate cuts in April and beyond, along with liquidity-enhancing measures from the RBI.

We see a 50-bps rate cut cycle from here, inflation is expected to be well within target range of MPC and growth is expected to come back to a long-term potential growth rate. This can change if tariff-related uncertainty hurts growth worldwide including India with reciprocal actions by other major economies. The 10 year is expected to trade within 6.50-6.65% in the near term.

Source: MFI Explorer; Above returns are calculated assuming investment of ₹10,000/- on the 1st working day of every month. CAGR return are computed after accounting for the cash flow by using XIRR method (investment internal rate of return) for Regular Plan -Growth option. The above investment simulation is for illustrative purposes only and should not be construed as a promise on minimum returns and safeguard of capital.

THIS PRODUCT IS SUITABLE FOR INVESTORS WHO ARE SEEKING\*  
• Capital appreciation over long term;  
• Investment predominantly in equity and equity related instruments across market capitalization.

\*Investors should consult their financial advisers if in doubt about whether the product is suitable for them.  
\*\*With effect from November 05, 2018, Triparty Repo has replaced CBLOs for all schemes with provisions to invest in CBLO.

# 360 ONE QUANT FUND

(Formerly known as IIFL Quant Fund)  
(An open-ended equity scheme investing based on quant theme)

## Investment Objective

The investment objective of the scheme is to generate long term capital appreciation for investors from a portfolio of equity and equity related securities based on a quant theme. However, there can be no assurance or guarantee that the investment objective of the Scheme would be achieved.

## Fund Manager Mr. Parijat Garg

Mr. Parijat has over 16 years of experience in the financial services industry including algorithmic trading, stock broking and financial data services.

## Co- Fund Manager Mr. Ashish Ongari

Mr. Ashish has overall six years of experience in financial services, specializing in algorithmic trading and quantitative research. He holds a B.Tech from NITK, Surathkal, and has previously worked as a trader at Capitalmind and a quant analyst at Investmint. His expertise lies in factor investing, systematic trading, and portfolio optimization.

360 ONE ELSS TAX SAVER NIFTY 50 INDEX FUND

(Formerly known as IIFL ELSS NIFTY 50 Tax Saver Index Fund)  
(An open-ended Passive Equity Linked Saving Scheme with a statutory lock-in period of 3 years and tax benefit, replicating/tracking the Nifty 50 index)

asset

360 ONE

Investment Objective

The investment objective of scheme is to invest in stocks comprising the Nifty 50 Index in the same proportion as in the Index to achieve returns equivalent to the Total Returns Index of Nifty 50 Index (subject to tracking error), while offering deduction on such investment made in the scheme under section 80C of the Income tax Act, 1961. It also seeks to distribute income periodically depending on distributable surplus. There is no assurance or guarantee that the investment objective of the Scheme would be achieved. Investments in this scheme would be subject to a statutory lock-in of 3 years from the date of allotment to avail Section 80C benefits.

Fund Manager Mr. Parijat Garg

Mr. Parijat has over 16 years of experience in the financial services industry including algorithmic trading, stock broking and financial data services.

Co- Fund Manager Mr. Ashish Ongari

Mr. Ashish has overall six years of experience in financial services, specializing in algorithmic trading and quantitative research. He holds a B.Tech from NITK, Surathkal, and has previously worked as a trader at Capitalmind and a quant analyst at Investmint. ## IDCW Declared - Monthly IDCW Plan

Date	Face Value (₹)	Gross IDCW (₹) (Per Unit)	Regular Plan NAV (₹) (Ex-IDCW)	Direct Plan NAV (₹) (Ex-IDCW)
25-Mar-25	10	0.05	12.7039	13.6759
25-Feb-25	10	0.05	12.6294	13.5893
28-Jan-25	10	0.05	12.6407	13.5950
<b>Quarterly IDCW Plan</b>				
04-Jun-15	10	0.40	11.4678	11.5708
<b>HalfYearly IDCW Plan</b>				
04-Jun-15	10	0.40	11.4678	

IDCW is gross IDCW. To arrive at the net IDCW payable for corporate and non-corporate investors applicable IDCW distribution tax, if any, needs to be adjusted respectively. Past performance may or may not be sustained in future. After payment of IDCW the NAV has fallen to the extent of payout and distribution taxes if applicable. Monthly IDCW is not assured and is subject to availability of distributable surplus.

# 360 ONE Gold ETF

(An open-ended exchange traded fund replicating/tracking domestic prices of Gold.)

## Investment Objective

The investment objective of the scheme is to generate returns that are in line with the performance of physical gold in domestic prices, subject to tracking error. However, there is no assurance that the investment objective of the Scheme will be realized and the Scheme does not assure or guarantee any returns.

## Fund Manager Mr. Rahul Khetawat

Mr. Khetawat has over 14 years of experience of handling multiple asset classes including Forex.

## POTENTIAL RISK CLASS OF A SCHEME

360 ONE Asset Management Limited has positioned its debt schemes in terms of PRC matrix consisting of parameters based on maximum interest rate risk (measured by Macaulay Duration of the scheme) and maximum credit risk (measured by Credit Risk Value of the scheme). Accordingly, the debt schemes of the Mutual Fund shall be placed in PRC matrix as follows:

Credit Risk of scheme → Interest Rate Risk of the Scheme ↓	Relatively Low (Class A)	Moderate (Class B)	Relatively High (Class C)
Relatively Low (Class I)	A-I NIL	B-I 360 ONE Liquid Fund	C-I NIL
Moderate (Class II)	A - II NIL	B - II NIL	C-I NIL
Relatively High (Class III)	A - III NIL	B - III NIL	C - III 360 ONE Dynamic Bond Fund

## GLOSSARY OF TERMS

FUND MANAGER	An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.
APPLICATION AMOUNT FOR FRESH SUBSCRIPTION	This is the minimum investment amount for a new investor in a mutual fund scheme.
MINIMUM ADDITIONAL AMOUNT	This is the minimum investment amount for an existing investor in a mutual fund scheme.
YIELD TO MATURITY	The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.
SIP	SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests ₹ 500 every 15th of the month in an equity fund for a period of three years.
NAV	The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.
BENCHMARK	A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.
ENTRY LOAD	A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹ 100 and the entry load is 1 %, the investor will enter the fund at ₹ 101.
EXIT LOAD	Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is ₹ 100 and the exit load is 1%, the redemption price would be ₹99 per unit.
MODIFIED DURATION	Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.
STANDARD DEVIATION	Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.
SHARPE RATIO	The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
BETA	Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.
R-SQUARED	R-squared measures the relationship between a portfolio and its benchmark index. It measures the correlation of the portfolio's returns to the benchmark's returns.
TREYNOR RATIO	Developed by Jack Treynor, the Treynor ratio (also known as the "reward-to-volatility ratio") attempts to measure how well an investment has compensated its investors given its level of risk. The Treynor ratio relies on beta, which measures an investment's sensitivity to market movements, to gauge risk.
AUM	AUM or assets under management refers to the recent I updated cumulative market value of investments managed by a mutual fund or any investment firm.
TRACKING ERROR	Means the annualized standard deviation of the difference in daily returns between the underlying index and the NAV of the Scheme.
TRACKING DIFFERENCE	Means the annualized difference of daily returns between the index and the NAV of the Scheme.
HOLDINGS	The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.
NATURE OF SCHEME	The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.
RATING PROFILE	Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.
IDCW	Dividend option is renamed as Income Distribution cum Capital Withdrawal (IDCW) option for all Schemes effective from April 1, 2021

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.
