As specified in the clause 6.9 of SEBI Master Circular dated June 27, 2024, based on the current risk profile of the Scheme, the AMC is required to invest not less than 0.13 percent of the AUM of the scheme. Such investment shall be maintained at all times and shall not be redeemed unless the scheme is wound up.

For details please refer <https://www.360.one/asset-management/mutualfund/downloads/disclosures/>

Part III – OTHER DETAILS

A. COMPUTATION OF NAV

NAV of units under the Scheme shall be calculated as shown below:

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme's investments + Current Assets – Current Liabilities and Provision (including accrued expenses)}}{\text{No. of Units outstanding under Scheme/Plan on the Valuation Date}}$$

The NAV will be calculated up to four decimals. Thereafter, the NAV shall be calculated for close of each working day. The computation of NAV shall be in conformity with SEBI Regulations and guidelines as prescribed from time to time. The Direct Plan under the Scheme will have separate NAV. Separate NAV will be calculated and disclosed for each option. The NAVs of the growth option and the Income Distribution cum Capital Withdrawal will be different after the declaration of the first IDCW.

Illustration for Computation of NAV:

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme's investments + Current Assets – Current Liabilities and Provision (including accrued expenses)}}{\text{No. of Units outstanding under Scheme/Plan on the Valuation Date}}$$

$$1.109 = \frac{10,01,00,000.00 + 10,00,000.00 - 10,000.00}{1,00,00,000.00} \quad \frac{10,10,90,000.00}{1,00,00,000.00}$$

Methodology for calculation of sale and re-purchase price of the units of mutual fund scheme:

- **Ongoing Price for subscription (purchase)/switch-in (from other schemes/plans of the mutual fund) by investors (This is the price you need to pay for purchase/ switch-in):**

The Sale Price for a valid purchase will be the Applicable NAV.

The NAV will be calculated by rounding up to four decimal places for the Scheme.

Assumed NAV Rs. 11 per unit. Entry Load: NIL.

Purchase Price = NAV + (Entry Load (%) * NAV)

Purchase Price = 11 + (0% * 11)

Purchase Price = 11 + 0

Purchase Price = Rs. 11/-

Transaction charges and other charges/expenses, if any, borne by the investors have not been considered in the above illustration.

- **Ongoing Price for redemption (sale)/switch out (to other schemes /plans of the mutual fund) by investors (This is the price you will receive for redemptions/ switch-outs):**

The Redemption Price / Switch out price of the Units is the price at which a Unit Holder can redeem Units of a scheme. It will be calculated as described below:

Assumed NAV Rs. 11.00 per unit. Exit Load: 1%

Sale Price = NAV – (exit load (%) * NAV)

Sale Price = 11 – (1%*11)

Sale Price = 11 – 0.11

Sale Price = Rs.10.89

Redemption Price will be calculated up to four decimal places for the Scheme.

If the Scheme has no Exit Load, the Redemption Price will be equal to the Applicable NAV.

Transaction charges and other charges/expenses, if any, borne by the investors have not been considered in the above illustration.

Investors may note that the AMC has a right to modify the existing Load structure in any manner or introduce/ change Exit Load or a combination of Exit Load and / or any other Load subject to a maximum as prescribed under the Regulations and with prospective effect only.

The Mutual Fund will offer that the redemption price is not lower than 97% of the applicable NAV.

For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. please refer to SAI.

I. Introduction

A. Definition/interpretation

For detailed description of definitions/interpretations, please visit <https://www.360.One/asset-management/mutualfund/downloads/information-documents/>

B. Risk Factors

- Standard Risk Factors:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price/value/interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on the factors and forces affecting the capital market/bullion market.
- Past performance of the Sponsors/AMC/Mutual Fund does not guarantee the future performance of the Scheme.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and the returns. Investors are therefore urged to study the terms of offer carefully and consult their Investment Advisor before they invest in the Scheme.
- The Sponsor is not responsible or liable for any loss or shortfall resulting from the operation of the Scheme beyond the initial contribution made by it of an amount of Rs. 1 Lac towards setting up of the Mutual Fund.
- The present Scheme is not a guaranteed or assured return Scheme.

- Scheme Specific Risk Factors

Tracking Error Risk:

The Fund Manager would not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as the fees and expenses of the Scheme, corporate actions, cash balance and changes to the underlying index and regulatory restrictions, lack of liquidity which may result in Tracking Error. Hence it may affect AMC's ability to achieve close correlation with the underlying index of the Scheme. The Scheme's returns may therefore deviate from its underlying index. "Tracking Error" is defined as the standard deviation of the difference between daily returns of the underlying index and the NAV of the Scheme. The Fund Manager would monitor the Tracking Error of the Scheme on an ongoing basis and would seek to minimize the Tracking Error to the maximum extent possible.

Tracking errors are inherent in any index fund and such errors may cause the scheme to generate returns which are not in line with the performance of the Nifty 50 Index or one or more securities covered by / included in the Nifty 50 and may arise from a variety of factors including but not limited to:

1. Any delay in the purchase or sale of securities due to illiquidity in the market, settlement and realisation of sales proceeds, delay in credit of securities or in receipt and consequent reinvestment of dividend, etc.
2. The index reflects the prices of securities at a point in time, which is the price at close of business day on the stock exchange. The scheme, however, may trade the securities at different points in time during the trading session and therefore the prices at which the scheme trades may not be identical to the closing price of each scrip on that day on the respective stock exchange. In addition, the scheme may opt to trade the same securities on different exchanges due to price or liquidity factors, which may also result in traded prices being at variance from the closing price considered in the Index.
3. The potential of trades to fail may result in the scheme not having acquired the security at the price necessary to mirror the index.
4. Transaction and other expenses, such as but not limited to brokerage, custody, trustee and investment management fees.
5. Being an open ended scheme, the scheme may hold appropriate levels of cash or cash equivalents to meet on going redemptions.
6. The scheme may not be able to acquire or sell the desired number of securities due to conditions prevailing in the securities market, such as, but not restricted to circuit filters in the securities, liquidity and volatility in security prices.

The tracking error of the scheme based on past one year rolling data shall not exceed 2%. In case of unavoidable circumstances in the nature of force majeure, which are beyond the control of the AMCs, the tracking error may exceed 2% and the same shall be brought to the notice of Trustees with corrective actions taken by the AMC, if any.

The Scheme will disclose the tracking error based on past one year rolling data, on a daily basis, on the website of AMC and AMFI. In case the Scheme has been in existence for a period of less than one year, the annualized standard deviation shall be calculated based on available data.

Tracking Difference:

The tracking difference i.e. the annualized difference of daily returns between the index and the NAV of the Scheme will be disclosed on the website of the AMC and AMFI, on a monthly basis, for tenures 1 year, 3 year, 5 year, 10 year and since the date of allotment of units.

Risks associated with investing in Equities

- a. Investments in the equity shares of the Companies are subject to price fluctuation on daily basis. The volatility in the value of equity is due to various micro and macro economic factors like economic and political developments, changes in interest rates, etc. affecting the securities markets. This may have adverse impact on individual securities/sector and consequently on the NAV of Scheme.

- b. The NAVs of schemes investing in equity will fluctuate as the daily prices of the individual securities in which they invest fluctuate and the units when redeemed may be worth more or less than their original cost.
- c. The value of the Scheme's investments, may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or policies of any appropriate authority and other political and economic developments and closure of stock exchanges which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the units of the Scheme may fluctuate and can go up or down.
- d. Investors may note that Fund Manager's investment decisions may not always be profitable, as actual market movements may be at variance with anticipated trends.
- e. Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. Such securities, however, increase the risk of the portfolio. Additionally, the liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.
- f. The sector weightage in the scheme would be different from that in the Index. Because of this the scheme returns could be divergent from the Index returns and could also under-perform if the sector calls do not go right as expected by the fund management team.

Risk associated with Investing in Debt and money market instruments

The performance of the Scheme may be affected by changes in macroeconomic factors such as Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems.

Interest Rate/Price risk: This risk is associated with movements in interest rate, which depend on various factors such as government borrowing, inflation, economic performance etc. The values of investments will appreciate/depreciate if the interest rates fall/rise. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices generally increase. The extent of fall or rise in the prices depends upon factors such as coupon, residual maturity of the security, micro and macroeconomic scenario as well as the yield level at which the security is being traded.

Credit Risk/Default risk: Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest &/or principal payment obligations. This risk arises due to any uncertainty in counterparty's ability or willingness to meet its contractual obligations. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. Corporate bonds carry a higher credit risk than Government Securities. Within corporate bonds as well, there are different levels of safety. Credit risks of most issuers of debt securities are rated by independent and professionally run rating agencies. Ratings of Credit issued by these agencies typically range from "AAA" (read as "Triple A" denoting "Highest Safety") to "D" (denoting "Default"), with

about 6 distinct ratings between the two extremes. A bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency. The highest credit rating (i.e. lowest credit risk) commands a lower yield for the borrower. Conversely, a lower rated credit borrower would raise funds at a relatively higher cost. On account of a higher credit risk for lower rated borrowers, lenders prefer higher rated instruments further justifying the lower yields.

Re-investment Risk: Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

Counterparty Risk: This is the risk of failure of counterparty to the transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the scheme in case of counterparty default.

Inflation risk: Inflation, in most basic terms, erodes the purchasing power of money and also withers the value of existing investments; in other words, it reduces the purchasing power of a bond investor's future interest payments and principal, collectively known as "cash flows." Inflation also leads to higher interest rates, which in turn leads to lower bond prices.

Liquidity risk: The liquidity of a bond may change depending on market conditions leading to changes in the liquidity premium linked to the price of the bond. At the time of selling the security, the security can become illiquid leading to loss in the value of the portfolio. There could therefore be difficulties in exiting from corporate bonds in times of uncertainties. Liquidity in a scheme therefore may suffer.

Liquidity Risk on account of unlisted securities: The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.

Settlement Risk: Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

Legislative Risk: Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the Schemes.

Risk of Rating Migration: It may be noted that the price of a rated security would be impacted with the change in rating and hence, there is risk associated with such migration.

Units of the Scheme cannot be assigned/ transferred/pledged/redeemed/switched out until completion of three years from the date of allotment of the respective Units

Risk factors associated with processing of transaction in case of investors investing in mutual fund units through Stock Exchange Mechanism:

The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption

of Units through NSE and/or BSE or any other recognized stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing / settlement, etc. upon which the Fund and the AMC have no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s) upon which the Fund and the AMC have no control. Accordingly, there could be negative impacts to the investors such as delay or failure in allotment / redemption of Units. The Fund and the AMC are not responsible for the negative impacts.

Risks associated with segregated portfolio:

The unit holders may note that no redemption and subscription shall be allowed in the segregated portfolio. However, in order to facilitate exit to unit holders in the segregated portfolio, the AMC shall enable listing of units of segregated portfolio on the recognized stock exchange.

The risks associated in regard to the segregated portfolio are as follows:

- The investors holding units of the segregated portfolio may not be able to liquidate their holdings till the time of recovery of money from the issuer.
- The security comprising the segregated portfolio may not realize any value.
- Listing of units of the segregated portfolio on a recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units of the segregated portfolio on the stock exchange.
- The trading price of units on the stock exchange may be significantly lower than the prevailing Net Asset Value (NAV) of the segregated portfolio.

C. Risk Mitigation Strategies

The Scheme aims to track Nifty 50 Index before expenses. The Index is tracked on a regular basis and changes to the constituents or their weights, if any, are replicated in the Underlying Portfolio with the purpose of minimizing tracking error.

Investments in equity, debt and money market securities carry various risks such as inability to sell securities, trading volumes and settlement periods, interest rate risk, liquidity risk, default risk, reinvestment risk etc. Whilst such risks cannot be eliminated, they may be mitigated by diversification. In order to mitigate the various risks, the portfolio of the Scheme will be constructed in accordance with the investment restriction specified under the Regulations which would help in mitigating certain risks relating to investments in securities market.

Further, the AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Internal limits are defined and judiciously monitored. Risk indicators on various parameters are computed and are monitored on a regular basis. There is a Board level Committee, the Risk Management Committee of the Board, which enables a dedicated focus on risk factors and the relevant risk mitigants.

For risk mitigation, the following may be noted:

Liquidity Risks:

Stocks in the Underlying Index are selected by applying liquidity as one of the criteria and hence the portfolio of Nifty 50 Index is reasonably liquid. The index is rebalanced based on certain criteria after which certain illiquid stocks are replaced by more liquid stocks. The fund manager makes the changes to the portfolio accordingly. Therefore, liquidity issues in the scheme are not envisaged.

Volatility risks:

There is the risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy etc. The scheme will manage volatility risk through diversification.

Interest Rate Risk:

Changes in interest rates affect the prices of bonds as well as equities. If interest rates rise the prices of bonds fall and vice versa. Equity might be negatively affected as well in a rising interest rate environment. A well-diversified portfolio may help to mitigate this risk.

II. Information about the scheme:**A. Where will the scheme invest –****Investment in Equities and equity related instruments**
