MONTHLY MARKET UPDATE

Equity Market

Indian Equity Markets: February 2026

India's benchmark equity indices rebounded in early February 2026, buoyed by the announcement of the India-US interim trade deal and the return of the foreign portfolio investors. The rupee also bounced back post the announcement of the trade deal as net FPI flows turned positive. However, the market soon gave up its gains as concerns emerged about the impact of AI disruption on information technology companies and about the broader impact on employment and consumption.

The Nifty 50 and BSE Sensex indices posted monthly losses of 0.6% and 1.2%, respectively, in February 2026. FPIs were net buyers of US\$2.5 bn in February, while Domestic Institutional Investors (DII) bought US\$4.2 billion during the month.

Broader market indices outperformed, with BSE Midcap and BSE Small Cap posting monthly gains of 1.0% and 0.5%, respectively. Among sectoral indices, Power, Consumer Durables and Healthcare outperformed with monthly gains of 9.0%, 7.0%, and 6.2%, respectively. In contrast, IT, Defence and Real Estate underperformed with monthly losses of 18.7%, -0.7% and -0.6%, respectively.

The RBI's Monetary Policy Committee (MPC) kept the repo rate and policy stance unchanged in its February 2026 meeting, citing a stable growth and inflation outlook. The MPC statement noted that underlying inflation remains low and the growth outlook is favourable. However, the RBI refrained from providing economic projections for H2FY27, opting to await the revised CPI and GDP series.

The NSO estimated FY2026 real GDP growth of 7.6% based on the new series with 2022-2023 as the base year, led by consumption growth of 7.7% and fixed investment growth of 7.1%. Real GVA is estimated at 7.7%, driven by manufacturing (11.5%), trade, hotels, transport (10.1%), financial, real estate, etc. (9.9%) and construction (7.1%). Nominal GDP growth was 8.6%, implying a deflator of 1%.

Under the new base, India's nominal GDP size declined 3.4% in FY2023-26 due to a reduction in informal sector contribution from 'trade, hotels, transport services', 'public administration and defence' and 'construction'.

India's retail inflation increased to 2.75% YoY in January 2026 under the new CPI series, compared with 1.33% YoY in the previous month under the old series. The base year for the revised series has been updated to 2024 from 2012 in the earlier series. The weight of 'Food and Beverages' has declined by ~9 percentage points in the new series, while the weight of services has increased, with separate heads for 'information & communication' and 'restaurants & accommodation'.

Outlook

The global environment remains volatile amid the ongoing conflict in the Middle East. The resulting rise in oil prices could place additional pressure on the current account and the INR in the near term. If higher crude prices are passed on to consumers through increased fuel prices, inflation may also move upward. This, in turn, could slow the early recovery seen in consumption-driven sectors. Ultimately, the extent of the economic impact will depend on the duration of these disruptions.

The budget 2026 was focused on reviving manufacturing. Multiple announcements across strategic and frontier sectors were aimed at boosting domestic manufacturing. Customs duty reductions and exemptions for key inputs are also aimed at supporting domestic manufacturing. Other initiatives to increase the IT services safe harbour threshold, and to offer tax holidays for cloud service providers and a 15% safe harbour for related entities, were targeted at new-age services. Overall, the budget focused on targeted reforms rather than big-ticket announcements to build economic resilience.

The India-US trade setting the tariff rate at 18% places India marginally ahead of competing markets under the China+1 strategy from an export-competitiveness perspective. Although, the US Supreme Court, in a 6-3 majority, ruled that the US administration's the reciprocal tariff imposition by the US administration ineffective.

When combined with trade arrangements with the European Union, the United Kingdom, Australia, New Zealand, the European Free Trade Association, and others, India has positioned itself as one of the most attractive manufacturing destinations for countries and corporations seeking to diversify supply chains away from China.

While the duration of US-Israel war against Iran is difficult to predict, we believe the spike in crude price is likely to be transitory as supply disruptions ease. Market returns in 2026 are likely to be driven by steady earnings visibility rather than valuation re-ratings, with resilient domestic flows providing stability. Foreign portfolio inflows are also poised to revive as Indian rupee may stabilise after the trade deal with US given India's strong macroeconomic fundamentals, including a stable current account deficit, subdued inflation, and fiscal consolidation.

The economy's growth engine is transitioning from government-led capital spending toward private consumption, particularly discretionary segments. Multiple structural factors support a consumption rebound. Personal income tax cuts will increase household disposable income, thereby benefiting categories of discretionary spending. Inflation pressures have moderated significantly, further supporting consumption. Monetary accommodation and the RBI's relaxation of various banking norms are also leading to credit expansion.

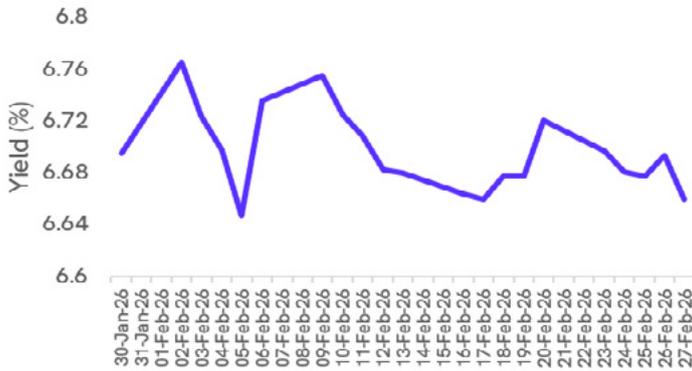

Given this backdrop, we prefer domestically focused sectors over those dependent on global dynamics, as internal fundamentals provide greater resilience amid international uncertainties. This strategic bias has shaped our positioning and continues to guide our investment approach.

February 2026: Assessment and Outlook

Macros:

India's retail inflation increased to 2.75% YoY in January 2026 under the new CPI series, compared with 1.33% YoY in the previous month under the old series. In January 2026, inflation remained moderate across most major categories, except for the personal care+ segment, which was lifted by rising precious metal prices. In food, vegetable & pulses prices continued to register deflation. Onion and potato prices recorded a sharp year-on-year decline, while tomato prices posted a strong increase. Other food categories, such as meat, fish, fruits, and oils, witnessed elevated inflation.

The RBI's Monetary Policy Committee (MPC) kept the repo rate and policy stance unchanged in its February 2026 meeting, citing a stable growth and inflation outlook. The MPC statement noted that underlying inflation remains low and the growth outlook is favourable. The RBI revised its FY26 CPI inflation forecast to 2.1%, up from 2.0% in the previous policy. Projections for H1FY27 were also revised upward by 10-20 bps, primarily due to higher precious metal prices. On growth, the RBI revised H1FY27 GDP projections marginally upward by 20 bps, reflecting resilient economic activity. However, the RBI refrained from providing economic projections for H2FY27, opting to await the revised CPI and GDP series.

During April-January 2026, direct tax collections recorded an expansion of 9.3% YoY, on account of 14.7% YoY growth in corporation tax. Income tax collections grew at a comparatively weaker 4.9% YoY. Indirect tax collections expanded by 8.2% YoY. Non-tax revenues grew 19.2% YoY, driven by the higher RBI dividend of Rs 2.69 tn. Disinvestment proceeds were also higher, at Rs 371 bn, compared with Rs 90 bn in the same period last year. Total expenditure grew by 3.4% YoY, led by a 11.2% YoY rise in capital expenditure. Credit growth increased to 13.7% YoY in mid-February 2026 from 13.1% in mid-January. Deposit growth also improved to 11.0% from 10.6% during the same period.

Global:

The US Supreme Court ruled against Trump's tariffs, terming them illegal. This was followed by Trump's announcement of a 10% global tariff, which will be applied over and above specific tariffs under sections 232 and 301. The US economy expanded an annualized 1.4% in Q4 2025, the least since Q1 2025, following a 4.4% growth in Q3. Consumer spending slowed (2.4% vs 3.5%), weighed down by a 0.1% decline in goods purchases, while services spending rose 3.4%. Meanwhile, exports fell 0.9% after surging 9.6% in Q3, and imports also declined, though at a slower pace (-1.3% vs -4.4%). Government spending and investment contracted sharply by 5.1% (vs 2.2%), subtracting 0.9 pp from overall growth, due to the government shutdown. In the U.S., 10-year Treasury yields fell sharply by about 30 bps in February to ~3.94%, amid rising expectations that the Fed's tightening cycle is over.

The ECB left interest rates unchanged at its first policy meeting of 2026, reiterating that inflation is expected to stabilise at its 2% target over the medium term. The ECB said the euro area economy remains resilient, but cautioned that the outlook remains uncertain, particularly due to global trade policy risks and ongoing geopolitical tensions.

MONTHLY MARKET UPDATE

Debt Market

Oil prices surged as joint US and Israeli strikes on Iran sharply escalated tensions across the Middle East. Meanwhile, OPEC+ agreed to increase production by 206,000 bpd in April, ending a three-month pause, but well below the 411,000-548,000 bpd that had been previously considered. The conflict has also led to a rise in yields globally as investors have been revising inflation expectations since the outbreak of hostilities last week, reinforcing bets that the Federal Reserve may delay rate cuts.

Markets:

Indian bond yields moved down marginally in February, supported by the benign inflation data and the RBI's steady policy stance. The 10-year benchmark G-Sec yield closed around 6.66% at end-February, 4 bps lower than end-January. Yields had risen temporarily early in the month in anticipation of heavy government borrowing, but the Union Budget's fiscal discipline and the RBI's continued pause on rates reassured bond investors. The yield curve has steepened as yields for higher tenors increased. Positive sentiment after the US-India trade deal and RBI's OMOs has limited the upward pressure on yields. Since H2 2025, RBI has infused liquidity worth ~ Rs 4.5 trillion via OMOs, improving system liquidity. FIIs also bought \$1.2bn in the bond market in Feb (vs \$0.8bn in Jan). Domestic Institutional Investors (DIIs) showed strong buying activity.

Liquidity conditions have eased again with month end spending. Banks are again parking close to 4.25 tn at SDF vs 3.5 tn last week. Durable surplus remains at INR 4 tn driven by increases in CIC and some FX intervention by RBI. Banking system liquidity has remained in surplus, with a series of quasi or incremental easing measures keeping call rates around 25 basis points below the repo rate and moderating short-term funding costs. For the last fortnight of FY2026, following the brief frictional tightness of advance taxes and GST outflows, we expect government spending to pick up pace, eventually keeping liquidity surplus comfortable at ~Rs3tn towards the end of the year.

Outlook:

The Indian fixed income market is navigating a complex crossroads. On one hand, the domestic growth narrative remains exceptionally strong (7.6% GDP growth), and the government is committed to a disciplined fiscal glide path (4.3% deficit target). On the other hand, a large borrowing program and escalating geopolitical risks present clear hurdles to a deep yield rally. High forex reserves provide the firepower to manage and cushion against external headwinds.

We maintain a cautiously positive outlook on Indian bonds due better Real Yields and Accrual and Proactive RBI Support, additionally, currency pressures, persistent geopolitical tensions, rising global bond yields, and uncertainty around international tariffs may contribute to market volatility. However, government measures such as switches, buybacks, and open market operations (OMOs) by the RBI to support liquidity are expected to ease some supply-side pressures. Thus, we expected domestic bond yields to likely remain range bound.

MONTHLY MARKET UPDATE

Precious metal outlook

Gold -

Gold prices soared to life highs, peaking above \$5620.8/oz in January before correcting to 4428.7/oz. and marginally recovered in **February** and closed at 4800/oz USD. The correction was driven by reduction in trading limits by Chinese regulators, increase in margin on precious metals positions but gold remain well supported by as investors continued to hedge against macro uncertainty.

Key Drivers

Gold may be able to “hold higher” (i.e., a new floor) but upside may be more limited unless there’s a big shock (e.g., major inflation, fiscal crisis, de-dollarisation).

Factors supporting gold Prices -

- Continued central bank buying—especially by China and India
- Continued monetary accommodation. U.S GDP growth number is good but labour market is under pressure.
- Persistent inflation, geopolitical tension, and trade policy uncertainty under President Trump.

Risks / headwinds

- If the Fed hikes rates or surprises to the upside on inflation, gold could face downward pressure.
- A strong U.S. dollar (due to economic recovery, rate differentials) would hurt gold’s appeal.
- If investor sentiment shifts from safe-haven to risk-assets, demand could drop.

Silver –

Silver broke its 14-year resistance at \$49.5 earlier in January and surged past \$122/oz at its peak; prices remain elevated at \$64.55–\$85/oz. Silver **outperformed gold in phases during February**, supported by both **safe-haven demand and industrial expectations**.

Factors supporting silver prices.

- Persistent supply deficit.
- Strong industrial demand, particularly from EV and electronics sectors.
- Robust ETF inflows and renewed investment interest.

Risks / headwinds

- Because silver has both safe-haven and industrial-commodity features, a drop in industrial demand could hurt it more than gold.
- Contraction in Industrial and investment demand post run up.
- Risk of government intervention to curb on speculation and hoarding because its critical metal for Industry.
- If the dollar strengthens or interest rates rise, silver may be hit doubly (safe-haven appeal drops + industrial demand slows).

The risk of the benchmark is Very High

As per AMFI Tier I Benchmark i.e. BSE 200 TRI

360 ONE ELSS TAX SAVER NIFTY 50 INDEX FUND

(An open-ended Passive Equity Linked Saving Scheme with a statutory lock-in period of 3 years and tax benefit, replicating/tracking the Nifty 50 Index)

Investment Objective

The investment objective of scheme is to invest in stocks comprising the Nifty 50 Index in the same proportion as in the Index to achieve returns equivalent to the Total Returns Index of Nifty 50 Index (subject to tracking error), while offering deduction on such investment made in the scheme under section 80C of the Income Tax Act, 1961. It also seeks to distribute income periodically depending on distributable surplus. There is no assurance or guarantee that the investment objective of the Scheme would be achieved. Investments in this scheme would be subject to a statutory lock-in of 3 years from the date of allotment to avail Section 80C benefits.

Fund Manager Mr. Ashish Ongari

Mr. Ashish has overall six years of experience in financial services, specializing in algorithmic trading and quantitative research. He holds a B.Tech from NITK, Surathkal, and has previously worked as a trader at Capitalmind and a quant analyst at Investmint. IDCW Declared - Monthly IDCW Plan

Date	Face Value (₹)	Gross IDCW (₹) (Per Unit)	Regular Plan NAV (₹) (Ex-IDCW)	Direct Plan NAV (₹) (Ex-IDCW)
24-Feb-26	10	0.05	12.9994	14.0741
27-Jan-26	10	0.05	12.9357	13.9984
30-Dec-25	10	0.05	12.9718	14.0306

Quarterly IDCW Plan

04-Jun-15	10	0.40	11.4678	11.5708
-----------	----	------	---------	---------

Half Yearly IDCW Plan

04-Jun-15	10	0.40	11.4678	
-----------	----	------	---------	--

IDCW is gross IDCW. To arrive at the net IDCW payable for corporate and non-corporate investors applicable IDCW distribution tax, if any, needs to be adjusted respectively. Past performance may or may not be sustained in future. After payment of IDCW the NAV has fallen to the extent of payout and distribution taxes if applicable. Monthly IDCW is not assured and is subject to availability of distributable surplus.

Scheme Performance

Past performance may or may not be sustained in future. Different plans shall have different expense structure. Point to Point (PTP) returns in ₹ is based on standard investment of ₹10,000; Since Inception date is 28-March-2025; *Domestic Price of Silver. Managed by the fund manager since 28 March 2025. The performance of the scheme is benchmarked to the Total Return variant of the Index. performance is calculated using CAGR for scheme that have completed one year or more, and simple annualised growth rate for scheme that are in existence for less than one year. Load is not taken into consideration for computation of performance.

THIS PRODUCT IS SUITABLE FOR INVESTORS WHO ARE SEEKING*

- To create wealth and income in the long term;
- Returns that are in line with the performance of Silver over the long term, subject to tracking errors.

*Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Scheme Risk-O-Meter

Benchmark Risk-O-Meter

POTENTIAL RISK CLASS OF A SCHEME

360 ONE Asset Management Limited has positioned its debt schemes in terms of PRC matrix consisting of parameters based on maximum interest rate risk (measured by Macaulay Duration of the scheme) and maximum credit risk (measured by Credit Risk Value of the scheme). Accordingly, the debt schemes of the Mutual Fund shall be placed in PRC matrix as follows:

Credit Risk of scheme → Interest Rate Risk of the Scheme ↓	Relatively Low (Class A)	Moderate (Class B)	Relatively High (Class C)
Relatively Low (Class I)	A - I 360 ONE Overnight Fund	B - I 360 ONE Liquid Fund	C - I NIL
Moderate (Class II)	A - II NIL	B - II NIL	C - I NIL
Relatively High (Class III)	A - III NIL	B - III NIL	C - III 360 ONE Dynamic Bond Fund

GLOSSARY OF TERMS

FUND MANAGER	An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.
APPLICATION AMOUNT FOR FRESH SUBSCRIPTION	This is the minimum investment amount for a new investor in a mutual fund scheme.
MINIMUM ADDITIONAL AMOUNT	This is the minimum investment amount for an existing investor in a mutual fund scheme.
YIELD TO MATURITY	The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.
SIP	SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests ₹ 500 every 15th of the month in an equity fund for a period of three years.
NAV	The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.
BENCHMARK	A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.
ENTRY LOAD	A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹ 100 and the entry load is 1 %, the investor will enter the fund at ₹ 101.
EXIT LOAD	Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is ₹ 100 and the exit load is 1%, the redemption price would be ₹99 per unit.
MODIFIED DURATION	Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.
STANDARD DEVIATION	Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.
SHARPE RATIO	The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
BETA	Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.
R-SQUARED	R-squared measures the relationship between a portfolio and its benchmark index. It measures the correlation of the portfolio's returns to the benchmark's returns.
TREYNOR RATIO	Developed by Jack Treynor, the Treynor ratio (also known as the "reward-to-volatility ratio") attempts to measure how well an investment has compensated its investors given its level of risk. The Treynor ratio relies on beta, which measures an investment's sensitivity to market movements, to gauge risk.
AUM	AUM or assets under management refers to the recent updated cumulative market value of investments managed by a mutual fund or any investment firm.
TRACKING ERROR	Means the annualized standard deviation of the difference in daily returns between the underlying index and the NAV of the Scheme.
TRACKING DIFFERENCE	Means the annualized difference of daily returns between the index and the NAV of the Scheme.
HOLDINGS	The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.
NATURE OF SCHEME	The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.
RATING PROFILE	Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.
IDCW	Dividend option is renamed as Income Distribution cum Capital Withdrawal (IDCW) option for all Schemes effective from April 1, 2021

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.
