<b>Investment Strategy</b>	<p>The Scheme would endeavour to identify the sectors that are likely to do well in the medium term, based on the business cycle of the economy and take focused exposure to securities of Companies in identified sectors. The sectors would be actively monitored and changes will be made to invest in sectors that will benefit from the current stage of the business cycle. The Scheme would take concentrated exposure in not more than 25 - 30 high conviction stocks in such sectors.</p> <p>The Scheme would be market cap agnostic and there wouldn't be any restriction on the sectors in which the fund can invest. Please refer SID for detailed investment strategy.</p>	
<b>Risk Profile of the Scheme</b>	<p>Mutual Fund Units involve investment risk including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:</p> <p><b>Risks associated with investing in Equities:</b></p> <p>a. Investments in the equity shares of the Companies are subject to price fluctuation on daily basis. The volatility in the value of equity is due to various micro and macro economic factors like economic and political developments, changes in interest rates, etc. affecting the securities markets. This may have adverse impact on individual securities/sector and consequently on the NAV of Scheme.</p> <p>b. The NAVs of schemes investing in equity will fluctuate as the daily prices of the individual securities in which they invest fluctuate and the units when redeemed may be worth more or less than their original cost.</p> <p>c. The value of the Scheme's investments, may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest</p>	

rates, currency exchange rates, changes in policies of the Government, taxation laws or policies of any appropriate authority and other political and economic developments and closure of stock exchanges which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the units of the Scheme may fluctuate and can go up or down.

d. Investors may note that Fund Manager's investment decisions may not always be profitable, as actual market movements may be at variance with anticipated trends.

e. Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. Such securities, however, increase the risk of the portfolio. Additionally, the liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

**Fund Specific Risk:** The sector weightage in the scheme would be different from that in the Index. Because of this the scheme returns could be divergent from the Index returns and could also under-perform if the sector calls do not go right as expected by the fund management team.

**Risk associated with Investing in Debt and money market instruments:**

The performance of the Scheme may be affected by changes in macroeconomic factors such as Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems, etc.

**Risk associated with Investing in Derivatives:**

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of the fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

**Risk factors associated with processing of transaction in case of investors investing in mutual fund units through Stock Exchange Mechanism:**

The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognized stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing / settlement, etc. upon which the Fund and the AMC have no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s) upon which the Fund and the AMC have no control. Accordingly, there could be negative impacts to the investors such as delay or failure in allotment / redemption of Units. The Fund and the AMC are not responsible for the negative impacts.

**Risk associated with Securities Lending and Borrowing:**

Securities Lending is a lending of securities through an approved intermediary to a

	<p>borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. For details on risk factors and risk mitigation measures, please refer SID.</p>
